BUMPER SYSTEM

GUARD-RAIL AND POST

Bumper system used to protect racks, walls, and machinery from impacts with moving vehicles such as forklifts and pallet trucks. Made of rigid polyurethane, resistant to temperatures from -30° C to +100° C, the guardrail and post are anchored to the floor with steel bars that ensure extremely high impact resistance. The protective bumpers are complementary safety products for the racks, as required by Italian Legislative Decree 81/08 and UNI 15635.

GUARD-RAIL

Diameter 70 mm.

PERIMETER MESH FENCING

Modular system in **electrowelded mesh** to cordon off access areas and protect machines in motion.

The mesh panels, with vertical wires welded on the outside, prevent climbing according to the specifications required by UNI 14120; where set forth in the project, the uprights ensure CE conformity based on the Machinery Directive 42/2006.

CONTAINMENT DAM AND TANKS

Containment Dam

Flexible polyurethane dam, useful for stemming leaks and deflecting liquids. The 45° cut allows several pieces to be added without the need for special accessories. Resistant to hydrocarbons and most acids except for nitric and hydrochloric acids.
